Hoplane

Fixed-price rides for mid-size US cities

Seed-stage company, raising a Series A · October 2026

Daniel Reyes, Co-founder and CEO

https://hoplane.github.io

The problem

- In mid-size cities, ride waits are often 15 to 25 minutes.
- Surge pricing doubles fares when riders need a car most.
- Drivers earn less than in big cities, so they leave, and waits get worse.
- People who ride to work or to medical care cannot plan.

Our solution

Fixed price

One fare before you book, set from distance and time of day.

Planned supply

Driver shifts planned a week ahead from expected demand.

Fair split

Drivers keep 80% of each fare and all tips.

Traction

18,000
monthly active riders, September 2026

$41,600
net revenue in September 2026

15%
monthly growth in net revenue, last six months

Live in three cities: Columbus, Dayton and Cincinnati.

Market

About 120 mid-size US metro areas, home to roughly 40 million people (our estimate).

We estimate a $6 billion yearly ride market in those cities, most of it served badly today.

Business model

A two-sided marketplace: riders and independent drivers.

- Hoplane keeps a 20% service fee on every fare.
- Average fare: $14.
- Business accounts for hospitals and employers: launched in 2026.

Competition

- Uber (https://www.uber.com): national, surge pricing, thin supply in our cities.
- Lyft (https://www.lyft.com): the same model, the same problem.
- Local taxi companies: phone booking, uneven service.

Team

Daniel Reyes, CEO

Eight years in bus operations at Miami Valley Coach Lines.

Priya Natarajan, CTO

Built freight route planning at Railbird Logistics.

Seventeen people in Columbus, plus more than 400 independent drivers.

Funding so far

March 2025: $1.2 million seed on a SAFE, led by Scioto River Angels, with Lantern Hill Capital and Marcus Bell.

Hoplane, Inc. is a Delaware C corporation.

Monthly burn: about $95,000.

The ask

$4M

Series A, priced equity, raising now

Use of funds

- Five new cities: 45%
- Engineering: 30%
- Driver sign-on bonuses: 25%
